```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        15. AAT12704-T12709 and AAT12961-T12974 represent hepatitis C virus (HCV) E1
and E2 protein coding sequence constructs. These sequences are included
in vectors for the production of recombinant E1, E2, and E1/E2 proteins.
The recombinant proteins can then be isolated using a method of the
constructs of the method, the envelope proteins are purified by
carrying out a disulphide bond cleavage, or a reduction step with a
carrying out a disulphide bond cleavage, or a reduction step with a
carrying out a disulphide bond cleavage, or a reduction step with a
carrying out a disulphide bond cleavage, or a reduction step with
CC flaulphide bond cleavage agent, after 1 psis of recombinant host cells.
The constructs containing the purified HCV envelope proteins can be used
The constructs can also be immobilised assay for detecting one or
antibodies in a sample, and in a serotyping assay for detecting one or
antibodies in a sample, and in a serotyping assay for detecting one or
constructs can also be immobilised on a solid substrate and incorporated
constructs can also be immobilised on a solid substrate and incorporated
constructs enversed phase hybridisation assay for determining the presence or
the genotype of HCV. The new purification method preserves the
conformation of the recombinantly expressed B1, E2 and B1/E2, and
conformation of the recombinantly expressed B1, E2 and B1/E2, and
conformation of more proteins. Antigens isolated using this method
conformation encouraminating proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   540

The present invention relates to new therapeutic vaccine compositions for inducing hepatitis C virus (HCV)-epecific antibodies, comprising a composition containing at least one purified recombinant HCV single or specific oligometric recombinant envelope proteins selected from an El and an E2 protein, and optionally a pharmaceutical adjuvant. The vaccines are useful for inducing HCV-specific antibodies or for immunising humans against HCV. The recombinant HCV E1 and/or E2 proteins are useful as vaccines or therapeutics, in HCV screening and confirmatory antibody tests, for raising antibodies, in the preparation of medicament, and for transing nutrioning of HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence is a coding sequence described in the exemplification of the invention.

invention. In the method, the envelope proteins are purified by carrying out a disulphide bond cleavage, or a reduction step with a disulphide bond cleavage agent. After 1918 of recombinant host cells. The constructs containing the purified HCV envelope proteins can be used for vaccinating humans against HCV, for in vitro detection of HCV antibodies in a sample, and in a serotyping assay for detecting one more serological types of HCV present in a biological sample. The constructs can also be immobilised on a solid substrate and incorporated into a reversed phase hybridisation assay for determining the presence or the genotype of HCV. The new purification method preserves the conformation of the recombinantly expressed B1, E2 and B1, E2, and ellminates contaminating proteins. Antigens isolated using this method are more reactive with human sera than those isolated by known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     301

The present invention relates to new therapeutic vaccine compositions for inducing hepatitis C virus (HCV)-specific antibodies, comprising a composition containing at least one purified recombinant HCV single or specific oligomeric recombinant envelope proteins selected from an E1 and an E2 protein, and optionally a pharmaceutical adjuvant. The vaccines are useful for inducing HCV specific antibodies or for immunising humans against HCV. The recombinant HCV E1 and/or E2 proteins are useful as vaccines or therapeutics, in HCV screening and confirmatory antibody tests, for raising antibodies, in the preparation of medicament, and for in vitro monitoring of HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence is a coding sequence described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 2; Page 206-209; 243pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to new therapeutic vaccine compositions for inducing hepatitis C virus (HCV)-specific antibodies, comprising a composition contenting at least one purified recombinant HCV single or specific oligomeric recombinant envelope proteins selected from an E1 and useful for inducing HCV-specific antibodies or for immunising humans against HCV. The recombinant HCV sincipals or therapeutics, in HCV screening and confirmatory antibody tests, for raising antibodies, in the preparation of medicament, and for in vitro monitoring of HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence is a coding sequence described in the exemplification of the invention.

AAT12704-T12709 and AAT12961-T12974 represent hepatitis C virus (HCV) El and E2 protein coding sequence constructs. These sequences are included in vectors for the production of recombinant El, E2, and El/E2 proteins. The recombinant proteins and the soldated using a method of the invention. In the method, the envelope proteins are purified by carrying out a disulphide bond cleavage, or a reduction step with a disulphide bond cleavage, or a reduction step with a disulphide bond cleavage agent, after lysis of recombinant host cells. The constructs containing the purified HCV envelope proteins can be used for vaccinating humans against HCV, for in viro detection on F HCV antibodies in a sample, and in a secrotyping assay for detecting one or more serological types of HCV present in a biological sample. The constructs can also be immobilised on a solid substrate and incorporated into a reversed phase hybridisation assay for determining the presence or the genotype of HCV. The new purification method preserves the conformation of the recombinantly expressed El, E2 and El/E2, and eliminates contaminating proteins. Antigens isolated using this method elements are active with human sera than those isolated by known
                                                                                                                                                                                    Purifying recombinant hepatitis. C virus (HCV) El and E2 envelope proteins - in presence of disulphide bond cleavage agent, to produce proteins suitable for direct use in vaccines or diagnostic assays of HCV
                                                                                                                                                                                                                                                                                                          Claim 23; Fig 21; 146pp; English.

These sequences are included in vectors for the production of recombinant E1, E2, and E1,E2 proteins. The recombinant proteins can then be isolated using a method of the cinvention. In the method, the envelope proteins are purified by carrying out a disulphide bond cleavage, or a reduction step with a carrying out a disulphide bond cleavage, or a reduction step with a carrying out a disulphide bond cleavage, or a reduction step with a carrying out a disulphide bond cleavage agent, after 1ysis of recombinant host cells. The constructs containing the purified HCV envelope proteins can be used to vaccinating the mustified HCV envelope proteins on the used antibodies in a sample, and in a serotyping assay for detecting one or more serological types of HCV present in a biological sample. The constructs can also be immobilised on a solid substrate and incorporated into a reversed phase hybridisation assay for determining the presence or the genotype of HCV. The new purification method preserves the conformation of the recombinantly expressed E1, E2 and E1/E2, and conformation of the recombinantly expressed E1, E2 and E1/E2, and colliminates contaminating proteins. Antigens isolated by known

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ACAACGGCCCTGGTGTATCGCAGCTGCTCCGGATCCCACAAGCTGTCGTGGACATGGTG 1045
                                                                                                                         The present invention relates to new therapeutic vaccine compositions for inducing hepatitis C virus (HCV)-specific antibodies, comprising a composition contenting at least one purified recombinant HCV single or specific oligomeric recombinant envelope proteins selected from an El and an E2 protein, and optionally a pharmaceutical adjuvant. The vaccines are useful for inducing HCV-specific antibodies or for immunising humans against HCV. The recombinant HCV El and/or E2 proteins are useful as vaccines or therapeutics, in HCV screening and confirmatory antibody tests, for raising antibodies, in the preparation of medicament, and for in vitro monitoring of HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence is a coding sequence described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          540

                                                                                                                                                                                                                                       TGCCCGGTTGCTCTTCTTCCTTCTTGGCTTTACTGTCTGACCATTCCAG
                                                                                        The sequences given in AAT30386-87 encode the 5'UTR/CORE/ENV/NS1/NS2/NS3 protein region derived from hepatitis C virus (HCV) isolates #4 and #6 respectively. The proteins encoded by these sequences particencode amino acids 384-495 of the HCV NS1 antigen. These protein fragments may be used in the detection of antibodies against HCV.
                                        Recombinant polypeptide comprising partial NS1 region of hepatitis non-A non-B viral antigen - used in a method for detecting antibodies against hepatitis non-A non-B virus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence is the genome of the non-A, non-B hepatitis virus (NANBHV) strain HC-J4. This sequence was derived by amplification by polymerase chain reaction. The nucleotide sequences derived from this amplification can be used to detect NANBHV infection which could not be detected by conventional methods. The detection which could highly specific and sensitive detection at an early phase of infection. The polypeptide product of this coding sequence can be use for the manufacture of vaccines and immunological pharmaceuticals and also to produce antibodies specific to NANBHV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TGCCCGGTTGCTCTTTCTCTTTCTTTGGCTTTACTGTCCTGTCTGACCATTCCAG

                                                                                                                                                                                                                                                                                                                                                                                                           The sequence is that of NANB hepatitis virus polynucleotide N-2540-2 which codes for a non-A, non-B (NANB) hepatitis virus gene HC-OM. The polypeptide it encodes may be used in a system for detecting NANB hepatitis. This method is highly specific and sensitive, and can detect NANB hepatitis virus which could not be detected by conventional methods.
                                                                                                        Antigen related to non-A and non-B hepatitis virus - comprises non-translation region comprising 340 - 341 mols. of nucleotides, non-translation region comprising 1885 - 2551 mols. of nucleotides including region 1,149 and, etc.

The location of the mutations are detailed in the specification. Also included are (1) an expression vector comprising a nucleotide sequence coding for the altered nucleic acids, which is transcriptionally coupled to an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            996
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequences given in AAQ63752-53 represent fragments of the non-A, non-B hepatitis virus (NANBHV) genome. These fragments were amplified using the primers given in AAQ63732-51. These primers were used in the detection of NANBH. The primers are based on the 5'-terminal region and the core protein coding region. The method allows highly sensitive detection of NANBHV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   847 recceerrecrerrecrarecrerrecrerrecrererrecrererreacearceae

Submitted (12-JUN-1999) Genoscope - Centre National de Sequencage: BP 191 91006 EVRY cedex - FRANCE (B-mail: seqref@genoscope.cns.fr. - Web: www.genoscope.cns.fr.)

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Direction of the Broger of Cancer Genetics at the Roswell Park Cancer Institute in Briffalo, NY. The library is named RPCI-98 and was constructed by partial Ecord disestion of Erosophila DNA provided by the Broge from the isogenic strain v2: cn bw sp, the same strain used for the Broger of the Broger of the Broger and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre of Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                           ô

ZAP II (Stratagene) in the EcoRI (5') and XhoI (3') sites. pBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with ExAssist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806."

Phys. 122: 127-135; TAP + H2O2 (1, 12, 24 hr); TAP + sorbitol (1, 2, 6, 24 hr); TAP + Gd (1, 2, 6, 24 hr).

PolyA mRNA was purified from each sample, pooled and cDNA synthesized. The CDNA was directionally cloned into lambda and II of Caratagene) in the EcoRI (5,) and KhORI (3,) sites. pBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with ExAssist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al., (1996) Genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            BJ536071 740 bp mRNA linear EST 09-AUG-2002 BJ536071 MF01SSB CDNA Oryzias latipes CDNA clone MF01SSB002D03 3',
